

S1Digital Launches New Custom Designed P500 Media Center

February 2nd, 2009 – Rochelle Park, NJ – S1Digital today launched the P500, the newest addition to S1Digital's high-performance ProLine Series Media Centers.

The P500 builds upon S1Digital's already successful line of Media Centers and provides customers with powerful features in a high-end, custom designed chassis. Available with up to four CableCard HDTV tuners plus an unencrypted QAM/ATSC tuner, Blu-ray movie playback with Profile 2.0 features, movie archiving capabilities, and three terabytes (2TB useable) of internal RAID-5 storage. The P500 supports HDMI (with 5.1 channel audio), DVI and component video outputs as well as digital optical and 7.1 channel analog audio. The P500 is powered by Intel's latest Core 2 Duo CPU, P45 motherboard and runs Vista Ultimate. RS-232 control is available via the built in serial port.

The P500 was designed from the ground up to look great out on display. Primarily designed for the living room, the P500 can also support up to three zones of audio and video streaming (via Extenders or other Media Centers).

The P500 is also upgradable with Soundpack option, which adds HDMI 1.3a and 7.1 channel analog audio outputs with RCA connectors. The Soundpack option features support for Protected Audio Playback System (PAPS) and Advanced

Access Content System (AACs) certification enabling the decoding of the latest HD audio formats in Blu-ray movies. This means the P500 can take full advantage of lossless digital audio formats such as Dolby® TrueHD and DTS-HD Master Audio™ for the ultimate aural experience.

The P500 is available now via the custom integrator channel. For more information or dealer and customer enquiries, visit www.s1digital.com, contact sales@S1Digital.com or call (888) 632-6897. All of S1Digital's solutions are now on display in S1Digital's new showroom at 174 State RT 17 N in Rochelle Park, NJ.
